Exercise 4: Defining Object Properties

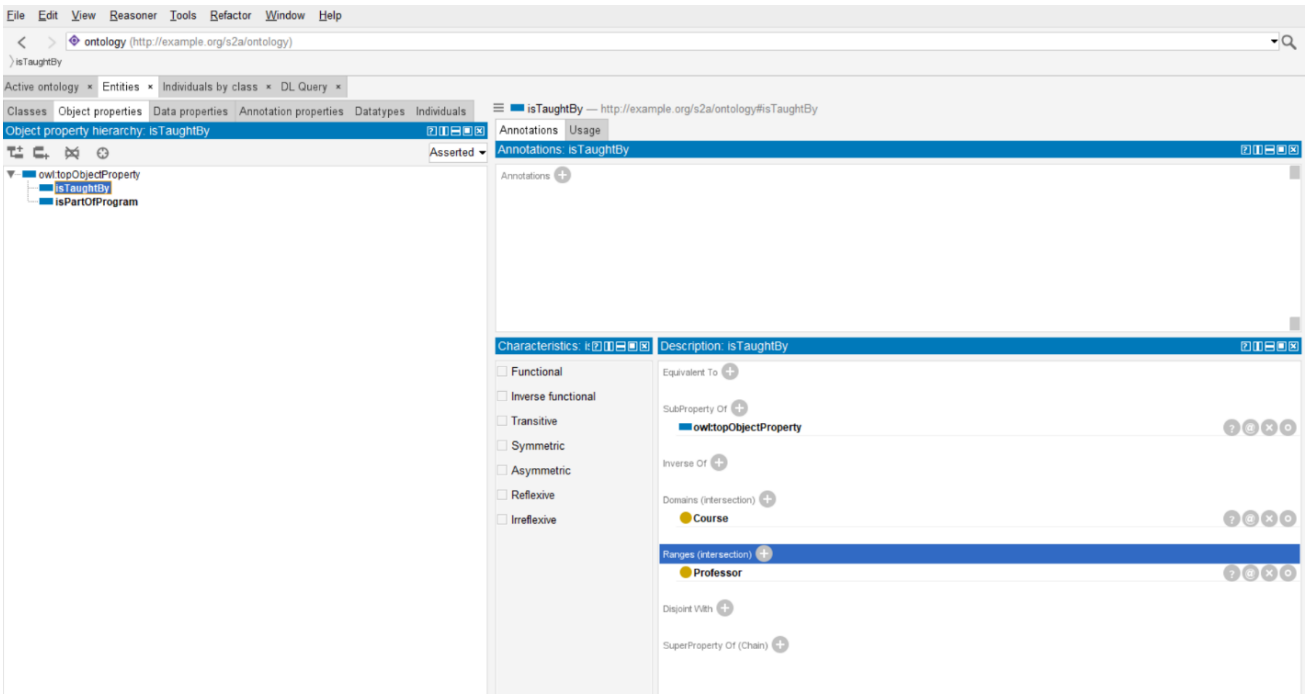

Figure 1: isTaughtBy object property mapping Course to Professor

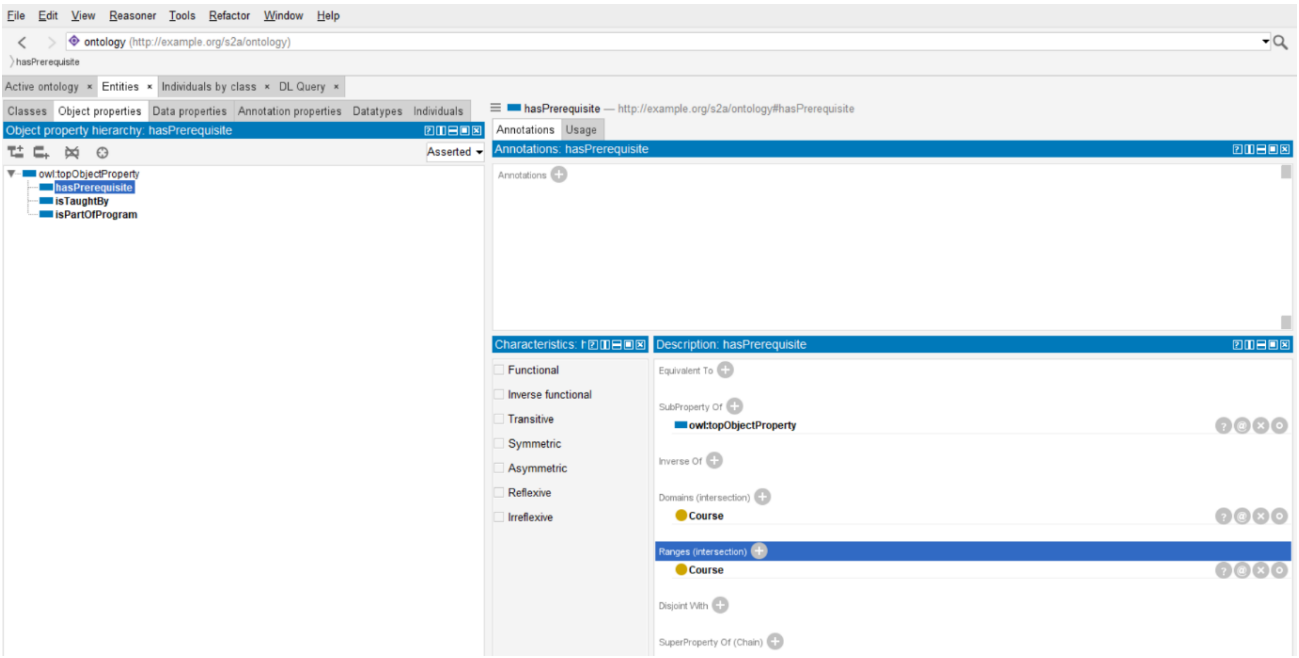

Figure 2: hasPrerequisite object property configured with Course as both domain and range

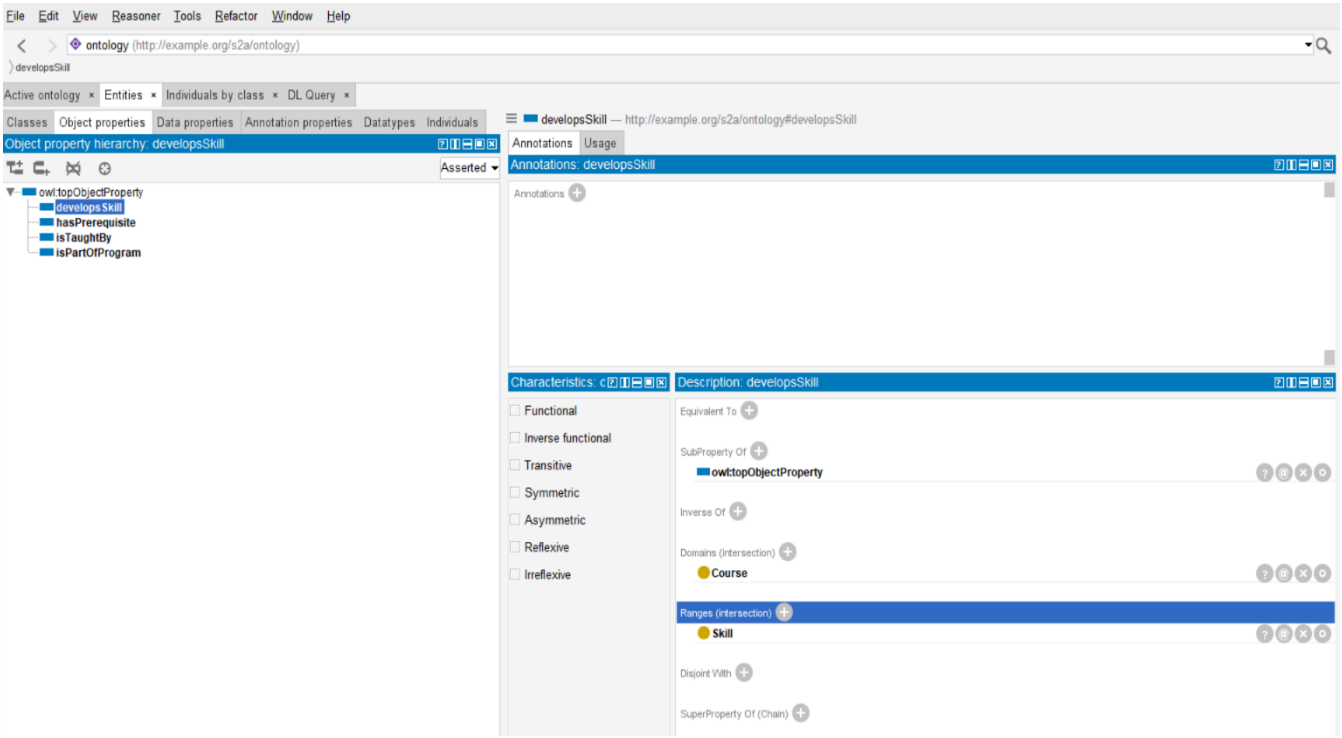

Figure 3: developsSkill object property linking Course to Skill

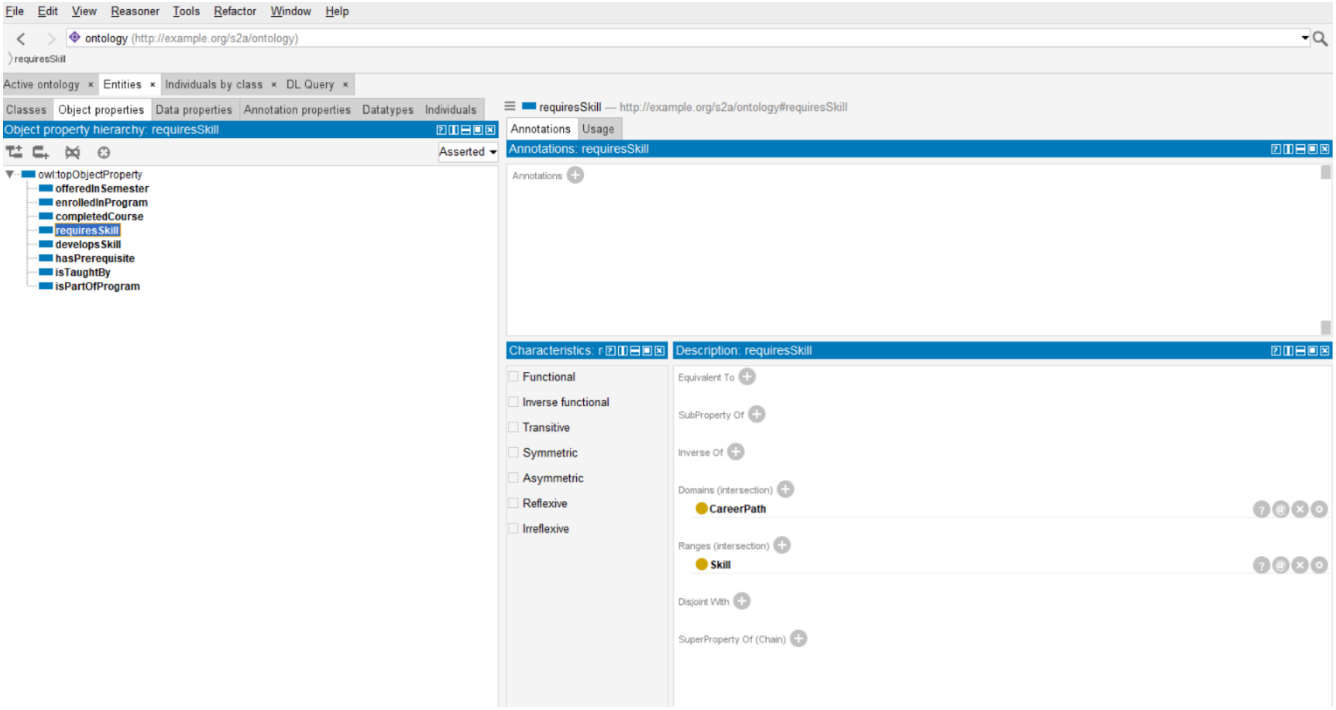

Figure 4: requiresSkill object property showing CareerPath connected to Skill.

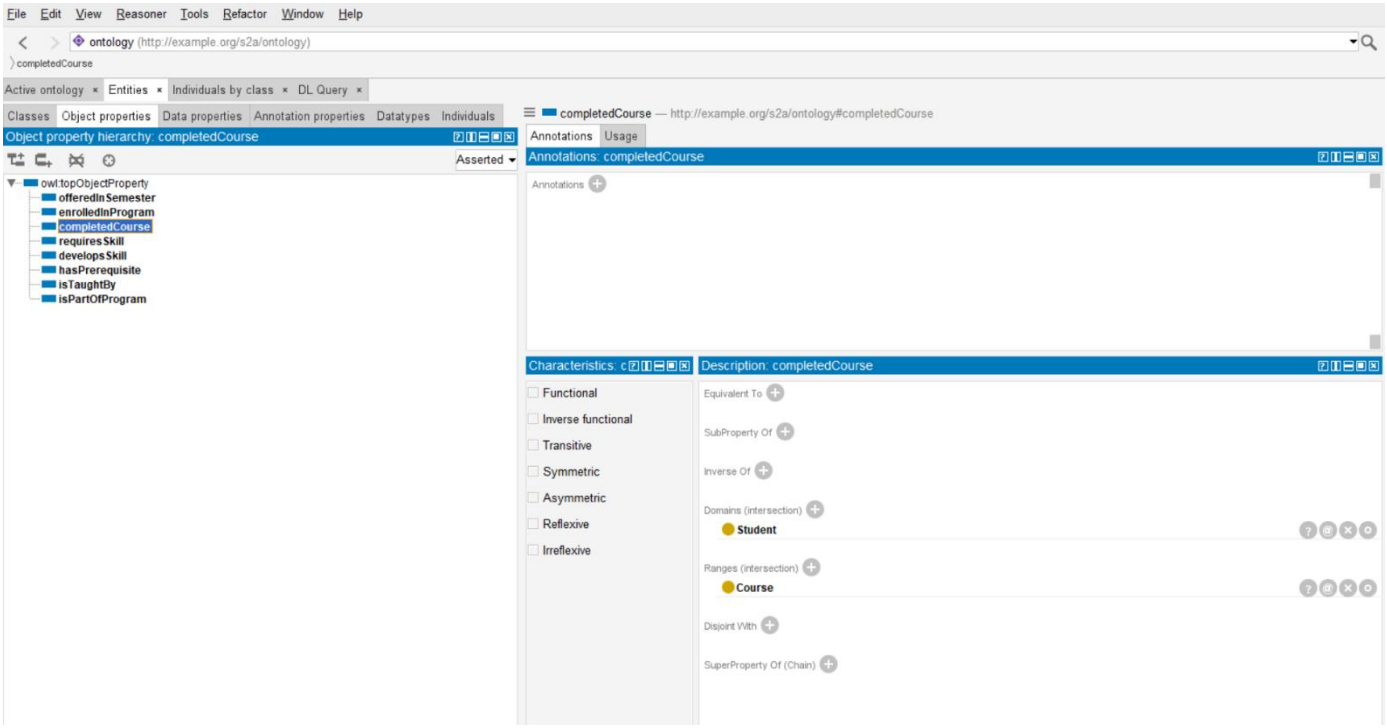

Figure 5: completedCourse object property connecting Student to Course

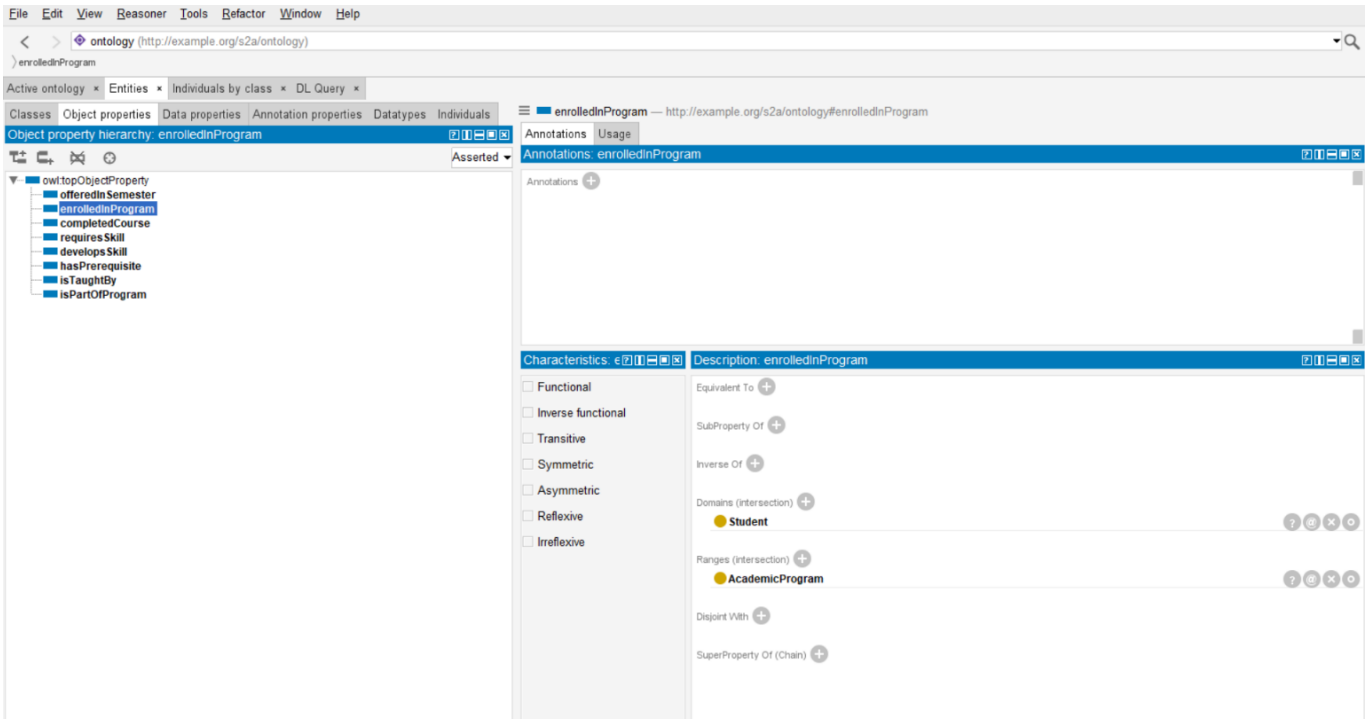

Figure 6: enrolledInProgram object property mapping Student to AcademicProgram.

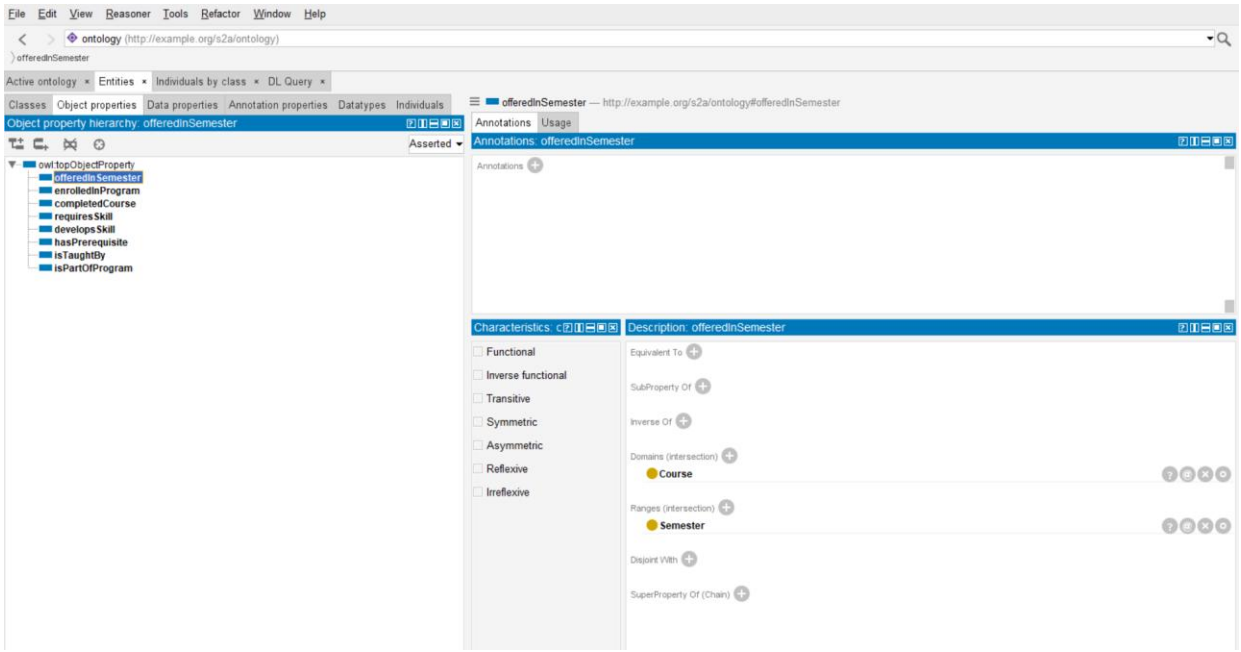

Figure 7: offeredInSemester object property linking Course to Semester.

Exercise 5: Defining Data Properties

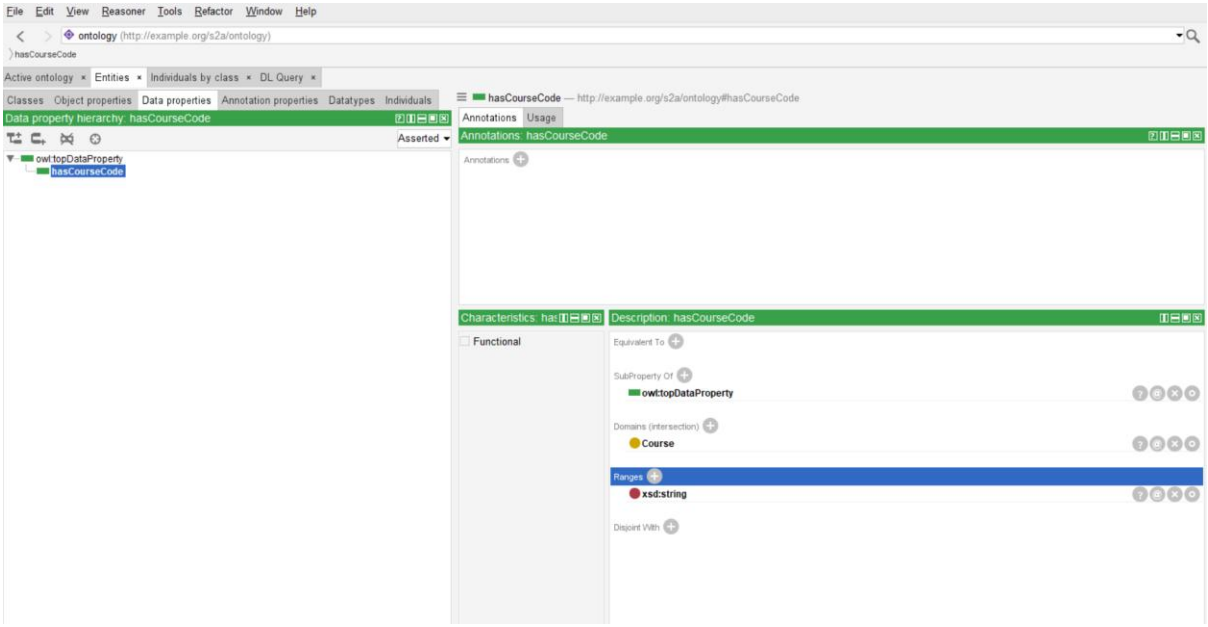

Figure 1: hasCourseCode data property set with Course domain and string datatype range.

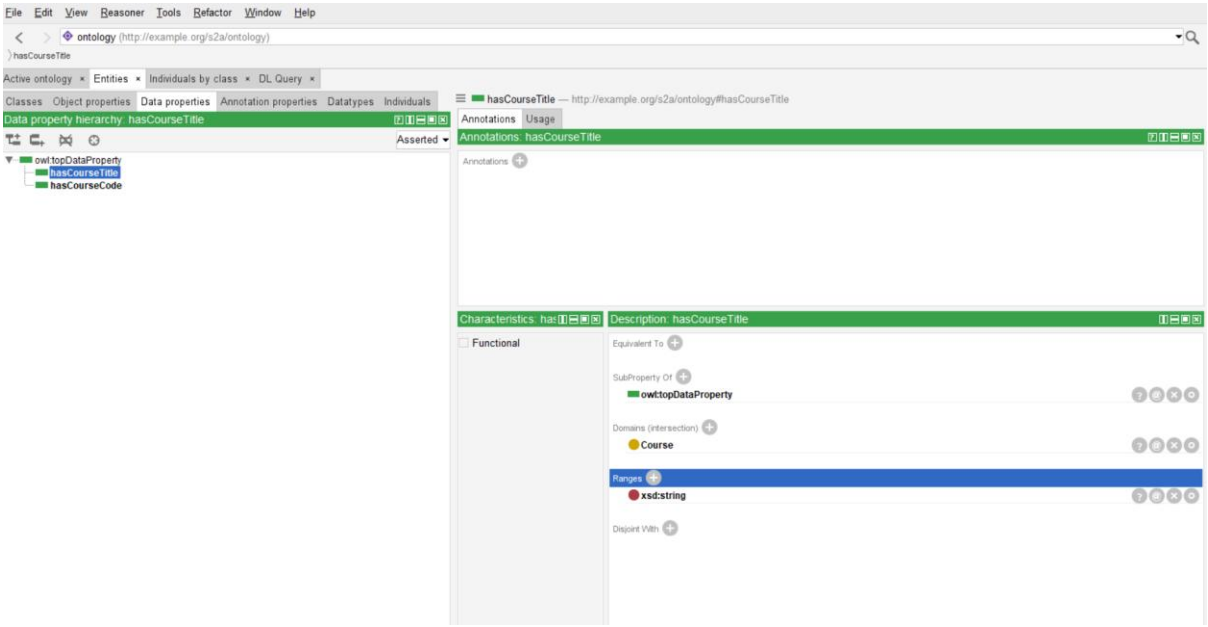

Figure 2: hasCourseTitle data property set with Course domain and string datatype range

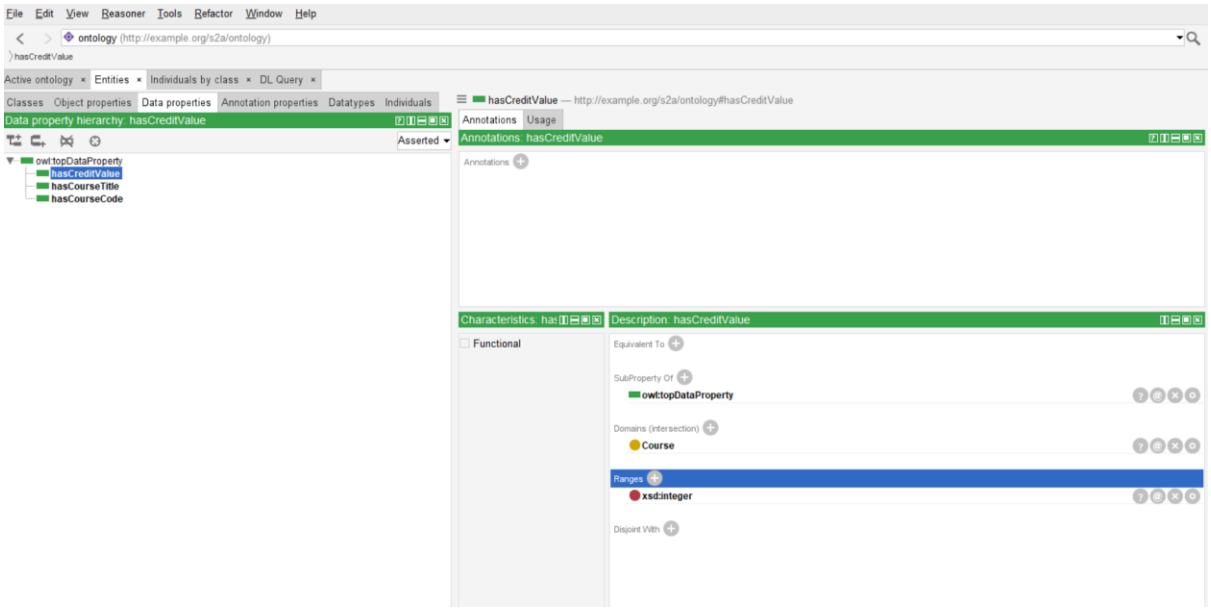

Figure 3: hasCreditValue data property set with Course domain and integer datatype range

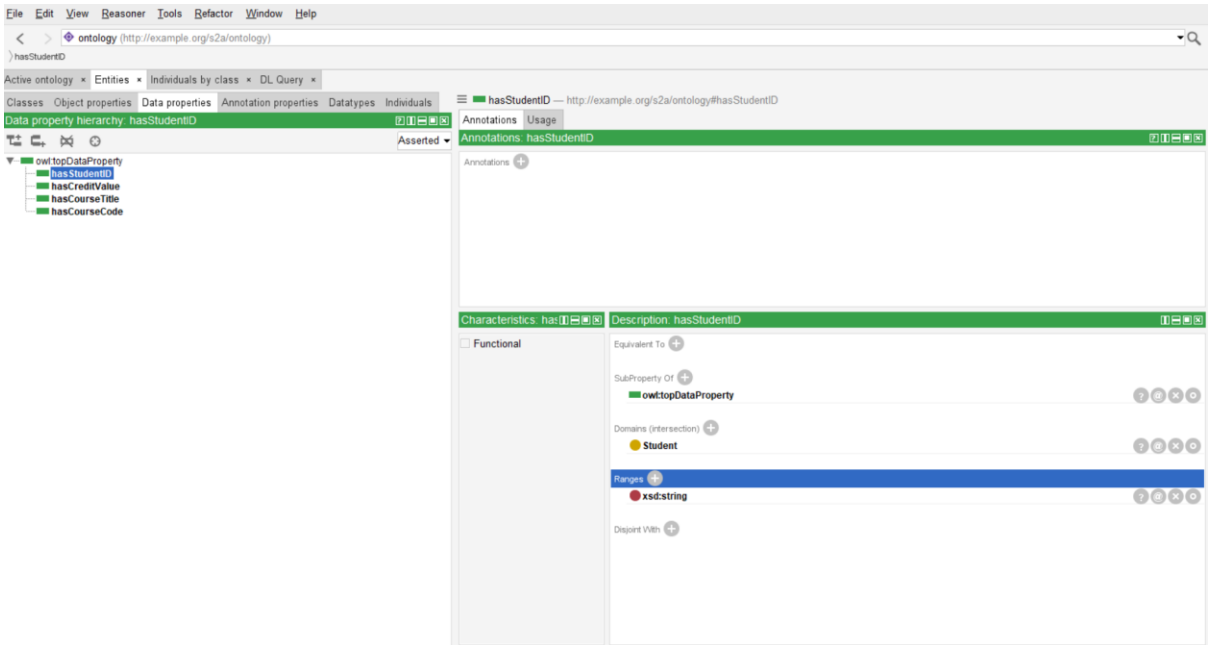

Figure 4: hasStudentID data property set with Student domain and string datatype range

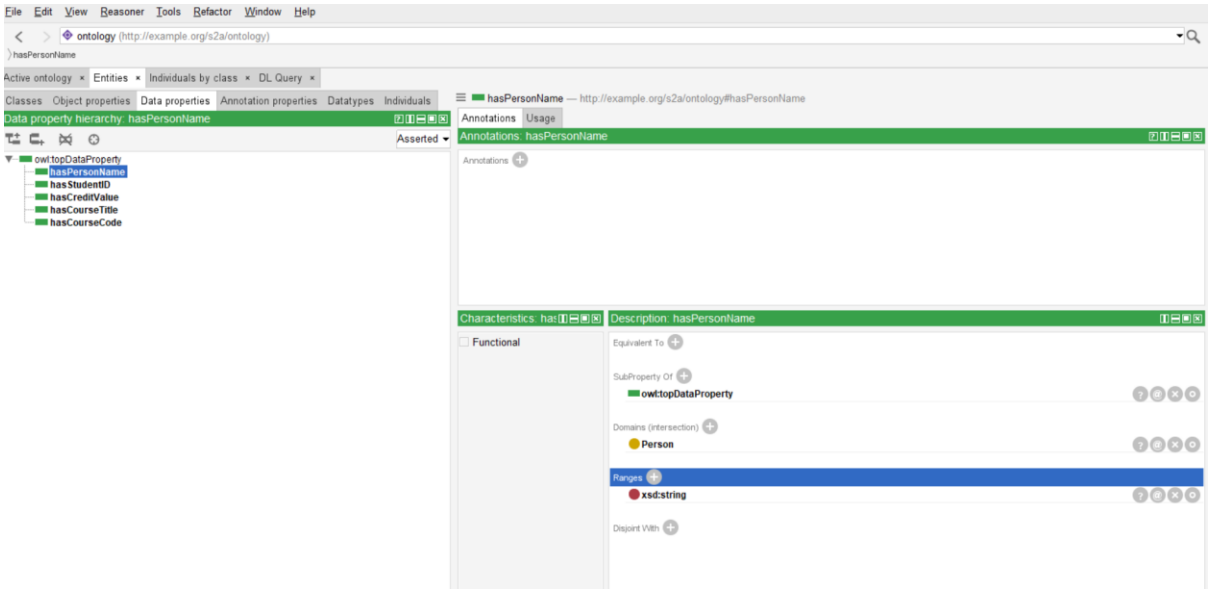

Figure 5: hasPersonName data property set with Person domain and string datatype range

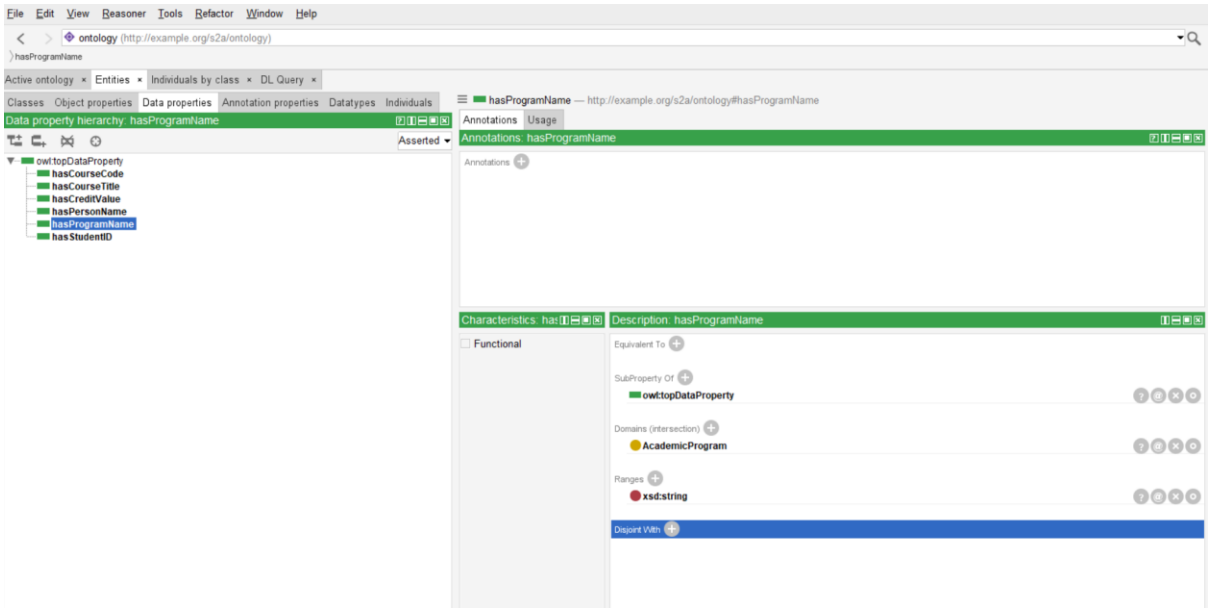

Figure 6: hasProgramName data property set with AcademicProgram domain and string datatype range
